Neuherberg, GERNANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by BWEZ (Biomedical Research Center at the
Heinrich-Heine-University, Duesseldorf/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKFZp434C0829) is available at the RZPD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin,
Please contact RZPD for ordering:

Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soarse, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel: First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with BCOR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Montal Health (NIMH), Hemin Chin, Ph.D.,

New 254P1D6B siRNA composition comprising a double si corresponds to the nucleic acid ORF sequence which es protein or corresponds to a subsequence of the ORF, i and treating cancer.

Claim 10; SEQ ID NO 4; 345pp; English.

The present invention describes a 254PlD6B small interfer composition that comprises a double stranded siRNA that the interfer acid open reading frame (ORF) sequence which the 254PlD6B protein, or corresponds to a subsequence of the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 consists essentially of, or consists of a peptide of eigenven contiguous amino acids of a protein of figure 2 (No.3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptic any of the 42 lists of peptides, given in the specificat that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or identical to an entire amino acid sequence of P1; (2) a that is a full complement of the polynucleotide describe generating a mammalian immune response directed to the generating, an a sample, the presence of a 254PlD6F-relate composition that status of a cell that expresses a protein of P1; (7) a per composition that comprises the composition described about those form; (8) an antibody or its fragment, which is a non-human transgenic animal that produces the antibody; (11) delivering a non-human transgenic animal that produces the antibody; (12) inhibiting growth, reproduction or survival of cance express the protein of P1: 254PlD6B has cytostatic active used in gene therapy. The compositions, molecules and me for treating and detecting cancer. The present sequence 254PlD6B v2, which is used in the exemplification of thromes

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the consists essentially of or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (PL, see SEQ ID NO.3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein CC that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or identical to an entire amino acid sequence of P1; (2) a polynuclectide that is a full complement of the polynuclectide described above; (4) centar in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polynuclectide; (6) a composition that modulates the captured or in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polynuclectide; (6) a composition that modulates the captuid or in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related protein of P1; (7) a pharmacentical composition that comprises the composition described above in a human control or an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and correct cells that composition or survival of cancer cells that expresses the protein of P1; and cused in a number of partine and described are used in a number or an order of a correct cells and each the protein of P1. 254P1D6B has cytostatic activity, and can be corrected to the protein of P1. 254P1D6B has cytostatic activity, and can be corrected to the protein of P1. 254P1D6B has cytostatic activity, and can be protein or aurainal agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for treating and detecting caneer. The present sequence encodes the human 254PID6B v.1 clone LCP-3, which is used in the exemplification of the present invention. The human 254PID6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                   Jakobovits A, Challita-Eid PM,

The present interaction describes a 237100 small interactions are present interaction that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the Catalloss protein, or corresponds to subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 23, 24, or 25 contiguous consists assentially of or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a pertide of eight, nine, ten, or eleven contiguous amino acids of a pertide of eight, nine, ten, or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99 homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) centraling, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related polynucleotide (6) a composition that modulates the composition that modulates the composition that modulates the composition that modulates the composition described above; (6) an arrival or a protein of F1; (7) a pharmaceutical control or a perting that composition described above in a human and that composition that modulates the composition that modulates the composition that composition that modulates the composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that composition that modulates the composition that modulates the composition that modulates the compositio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (10) a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B v.3 nucleotide sequence, which is used in the exemplification of the present invention. The human 254PlD6B gene is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New 254PlD6B BiRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a 254P1D6B small interfering RNA (siRNA)
                                                                                                                                                                               254PID6B-related protein; cytostatic; gene therapy; cancer; human; 254PID6B v.3; chromosome 6; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Jakobovits A, Challita-Eid PM,

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to subsequence of the encodes the 254PID6B protein, or corresponds to a subsequence of the composition where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 (Pl. see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00569), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein CC that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of Pl; (5) generating in a sample, the presence of a 254PID6B-related polynucleotide; (6) a composition that modulates the captum of a call that expresses a protein of Pl; (7) a pharmaceutical comprises the composition described above; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and cytotatic activity, and can be useful in gene therapy. The composition or survival of cancer cells that express the protein of Pl; 254PID6B has cytostatic activity, and can be useful or the present invention. The human 254PID6B are useful or human 254PID6B are useful in very an expresse the protein of Pl; content sequence represents the protein and protein or the present inventio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting

The present invention describes a 254PIDGB small interfering RNA (SiRNA) composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to a subsequence which encodes the corresponds to a subsequence of the oncodes the corresponds to a subsequence of the offer, where the couples stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID CO NO:3, 5 or 7 ADR00529, ADR00594 or ADR005956), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein control that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein of proceed that is a full complement of the polymucleotide described above; (4) composition that modulates the composition that modulates the composition that comprises the composition that modulates the composition that comprises the composition that modulates the composition that produces the antibody or its fragment, which is monoclonal; (2) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the protein of P1; and correct or a diagnostic agent to a cell that expresses the protein of correct correct correct coll that expresses the protein of correct correct correct correct coll that expresses the protein of correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct correct corre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New 254P1D6B SIRNA composition comprising a double stranded SIRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human 254P1D6B v.3 transcript variant nucleotide sequence SEQ ID NO:269.

that is a full complement of the polynucleotide described above, (4) generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PiD6B-related polynucleotide, (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and can be used in gene therapy. The compositions, molecules and methods are useful captured the protein of P1. 254PiD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PiD6B v.3 transcript variant nucleotide sequence, which is used in the examplification of the present invention. The human 254PiD6B gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1160
